

ABSTRACT OF THE DISCLOSURE

A mouse pointing device structure. The mouse pointing device structure includes a main body, a cover, a button device and an irradiation device. The cover is disposed on the main body and has a transparent portion. The button device is disposed on the cover. The transparent portion is located between the main body and button device. The irradiation device is disposed between the cover and main body. The light output from the irradiation device is output to the outside of the mouse pointing device structure through the transparent portion.
